

Permanent Mount Tent Trailer Rack System

The Permanent Mount Tent Trailer Rack mounts directly to the tent trailer rooftop. ProRac engineered mounting technology is utilized providing a simple, but incredibly strong mounting platform. A UV stabilized Santoprene® footpad is fitted to the UV stabilized super tough nylon foot sealing and preventing roof rack vibration. The rack offers a rugged aerodynamic design and is completely adjustable accommodating a variety of applications. The Pro-File crossbars are designed with a unique profile extruded from Aluminum 6063 alloy giving you a hefty 150-pound total load capacity (consult manufacturer for Tent Trailer roof weight limitations). Aluminum construction provides strength and rigidity while being lightweight and corrosion resistant.

Engineered Advantages:

- Durable black powder coated crossbars
- Crossbars have an integrated T-SLOT giving a clean looking and secure mounting method for bike carriers, water sport carriers, cargo boxes, etc
- Crossbar feet are injection molded from UV stabilized super tough Nylon
- Various crossbar widths are available to accommodate different tent trailers
- Full width crossbars provide a load-bearing surface for securing canoes, kayaks, bikes, and cargo pods
